

INTRODUCTION TO THE WORLD OF COMPUTERS

Application of Information and Communication Technologies

Dr. Muhammad Abdullah

Faculty of Computing and Information Technology (FCIT)
University of the Punjab, Lahore, Pakistan.

About the course

Course Title	<i>Application of Information and Communication Technologies</i>	
Credit Hours	Theory	Lab
	2	1
Textbooks	<p>A. Deborah Morley and Charles S. Parker, Understanding Computers: Today and Tomorrow, 16th edition, Cengage Learning, 2016, ISBN-13: 978-1337251853</p> <p>B. Nell Dale and John Lewis, Computer Science Illuminated, 6th Edition.</p>	
Reference Material/Suggested Readings	<p>C. Sinha, Pradeep K., and Priti Sinha. Computer fundamentals. BPB publications, 2010.</p> <p>D. Livesley, Robert Kenneth. An introduction to automatic digital computers. Cambridge University Press, 2017.</p> <p>E. Goel, Anita. Computer fundamentals. Pearson Education India, 2010.</p>	

About the course

- **Aims and Objectives**

- A thorough understanding of the user level of computers and their role in society.
- Sufficient knowledge of Information Technology and key concepts of the computer world.
- The ability to use computers to enhance productivity regardless of the type of discipline in which they are being used, including effective use of different productivity software.

About the course

- **Aims and Objectives (Cont.)**

- An overall understanding of different areas of ICT like computer and network communication hardware, system and application software, Internet and the world wide web, computer and network security, and data privacy.
- Be proficient enough to design, build and host a basic website.
- A primitive understanding of information systems and their development life cycle, the significance of e-commerce, and its business models.

Quizzes

- We will have few quizzes to check that you're keeping up with the material between exams
- Quizzes may be unannounced or announced in advance
- If you happen not to attend class on the day a quiz is given, you will get a 0 for that quiz

Honesty Policy

- Taking someone else's work and representing it as your own is lying, cheating, and stealing.
- Any reference material taken from the Web or other sources must be properly cited.
- Violations of the honesty policy will, at the very least, result in no credit for the work and 0 sessional marks.

Cheating on Homework Assignment

- Copying from another or copying from the Internet are considered as cheating.
- BOTH PARTIES participated in the cheating will be penalized

Attendance and Late Arrival

- You are expected to attend every lecture and be on time.
- If you must come in late for unavoidable reasons, take extreme care not to disturb the class.
- Anyone arriving after I finish taking attendance will be counted as absent for that day.

Computers in Your Life

- Why learn about computers?
 - Pervasive computing
 - Computers have become an integral part of our lives
 - Basic computer literacy
 - Understanding what a computer is and how it works

Computers in Your Life

- Before 1980
 - Computers were large and expensive
 - Very few people had access to them
 - Computers were mostly used for high-volume processing tasks
- Microcomputers in the early 1980s
 - Inexpensive personal computers
 - Computer use increased dramatically

Computers in Your Life

- Today

- Nearly 90% of US households include a computer, and most use computers at work
- Electronic devices are converging into single units with multiple capabilities
 - Check e-mail on the living room television
 - View Internet content on mobile devices
- Computer literacy is an essential skill for everyone

Computers in Your Life

TELEVISIONS

Can be used to access Web pages, e-mail, streaming movies, and other Internet content, in addition to viewing TV content.

Used with permission from Microsoft Corporation

SMARTPHONES

Can be used to access Internet content, play music and games, take photos, watch TV shows, and more, in addition to making phone calls.

Computers in the Home

- Computers used for a variety of tasks:
 - Looking up information and news
 - Exchanging e-mail
 - Shopping and paying bills
 - Watching TV and videos
 - Downloading music and movies
 - Organizing digital photographs
 - Playing games
 - Making vacation plans

Computers in the Home

- Used for reference, productivity, and entertainment
- Wireless networking
 - Computers can be used in nearly any location
- Smart appliances
 - Traditional appliances with built-in computer or communication technology
- Smart homes
 - Household tasks are monitored and controlled by a main computer in the house

Computers in Education

- Youth today: the computing generation
- Computer labs and classrooms
 - Most students today have access to computers at school
 - Some schools integrate e-books into the curriculum
- Wireless hotspots
 - Colleges and universities are even more integrated
 - Some have computer requirements for enrollment
 - Supplied or Bring Your Own Device (BYOD)
- Distance learning
 - Students participate from locations other than the traditional classroom setting using computers and Internet access

Computers in Education

© Goodluz Shutterstock.com

COMPUTER LABS AND CLASSROOMS

Many schools today have computers and Internet access available in the classroom and/or a computer lab for student use.

© iStockphoto.com/sturti

CAMPUS WIRELESS HOTSPOTS

Many students can access the Internet from anywhere on campus to do research, check e-mail, and more, via a campus hotspot.

Denver Nakke, 7th Army JMTIC

DISTANCE LEARNING

With distance learning, students—such as these U.S. Army soldiers—can take classes from home or wherever they happen to be at the moment.

Computers on the Job

- Computers have become a universal on-the-job tool for decision-making, productivity, and communication
 - By all types of employees
 - For access control and other security measures
 - For service professional use
 - Extensively by the military
 - Requires continually refreshing computer skills
- Common uses:
 - Decision-making, productivity, off-site communications, and authentication

Computers on the Job

DECISION MAKING

Many individuals today use a computer to help them make on-the-job decisions.

PRODUCTIVITY

Many individuals today use a computer to perform on-the-job tasks efficiently and accurately.

OFF-SITE COMMUNICATIONS

Many individuals use portable computers or mobile devices to record data, access data, or communicate with others when they are out of the office.

AUTHENTICATION

Many individuals are required to use authentication systems to punch in and out of work, access facilities, or log on to company computers.

Computers on the Go

- Computers are encountered in nearly every aspect of daily life
 - ATM transactions
 - POS systems at retail stores
 - Self-checkout systems
 - Consumer authentication systems
 - Portable computers or mobile devices
 - GPS systems

Technology and You Box

- **Restaurant iPad Ordering Systems**
 - Used in conjunction with e-menus
 - Customers can place and pay for orders
 - Can provide more resources to customers

What Is a Computer and What Does It Do?

- Computer
 - A programmable electronic device that accepts data, performs operations on that data, and stores the data
 - Follows instructions, called programs, which determine the tasks the computer will perform
- Basic Operations
 - Input: Entering data into the computer
 - Processing: Performing operations on the data
 - Output: Presenting the results
 - Storage: Saving data, programs, or output for future use
 - Communications: Sending or receiving data

What Is a Computer and What Does It Do?

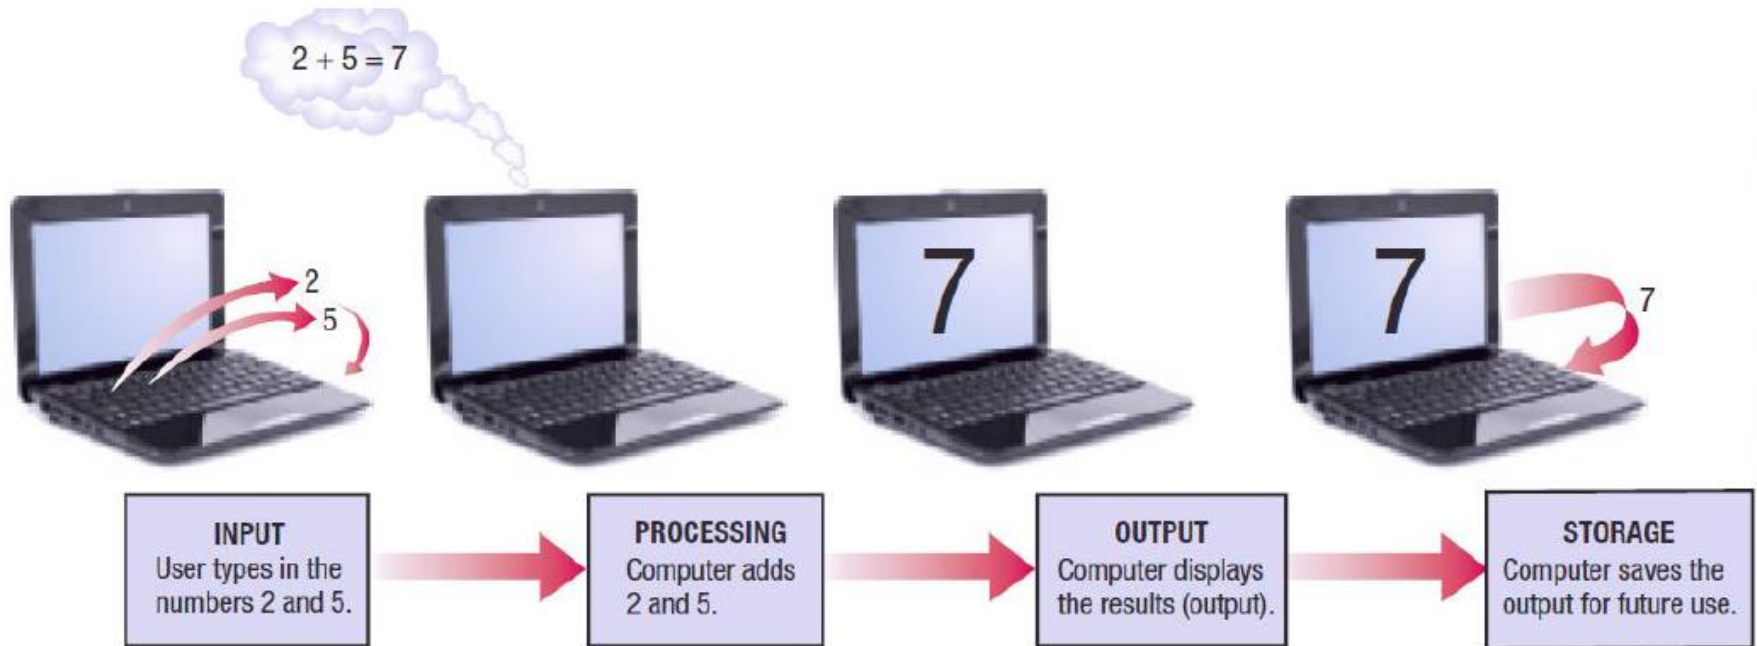

FIGURE 1-6
The information processing cycle.

Data vs. Information

- Data
 - Raw, unorganized facts
 - Can be in the form of text, graphics, audio, or video
- Information
 - Data that has been processed into a meaningful form
- Information Processing
 - Converting data into information

Computers Then and Now

- The computer as we know it is a fairly recent invention
- The history of computers is often referred to in terms of generations
- Each new generation is characterized by a major technological development
- Precomputers and early computers (before approx. 1946)
 - Abacus, slide rule, mechanical calculator
 - Punch Card Tabulating Machine and Sorter

Computers Then and Now

- First-generation computers (1946-1957)
 - Enormous and powered by vacuum tubes
 - Used a great deal of electricity and generated a lot of heat
 - ENIAC and UNIVAC
- Second-generation computers (1958-1963)
 - Used transistors
 - Computers were smaller, more powerful, cheaper, more energy-efficient, and more reliable
 - Punch cards and magnetic tape were used to input and store data

Computers Then and Now

- Third-generation computers (1964-1970)
 - Used integrated circuits (ICs)
 - Keyboards and monitors introduced
- Fourth-generation computers (1971-present)
 - Use microprocessors
 - IBM PC, Apple Macintosh
 - Use keyboards, mice, monitors, and printers
 - Use magnetic disks, flash memory, and optical disks for storage
 - Computer networks, wireless technologies, Internet introduced

Computers Then and Now

- Fifth-generation (now and the future)
 - Infancy stage
 - May be based on artificial intelligence (AI)
 - Will likely use voice and touch input
 - May be based on optical computers and utilize nanotechnology

Computers Then and Now

PRECOMPUTERS AND EARLY COMPUTERS

Dr. Herman Hollerith's Punch Card Tabulating Machine and Sorter is an example of an early computing device. It was used to process the 1890 U.S. Census data.

FIRST-GENERATION COMPUTERS

First-generation computers, such as ENIAC shown here, were large and bulky, used vacuum tubes, and had to be physically wired and reset to run programs.

SECOND-GENERATION COMPUTERS

Second-generation computers, such as the IBM 1401 mainframe shown here, used transistors instead of vacuum tubes so they were smaller, faster, and more reliable than first-generation computers.

THIRD-GENERATION COMPUTERS

Third-generation computers used integrated circuits which allowed the introduction of smaller computers, such as the IBM System/360 mainframe shown here.

FOURTH-GENERATION COMPUTERS

Fourth-generation computers, such as the original IBM PC shown here, are based on microprocessors. Most of today's computers fall into this category.

FIGURE 1-7
A brief look
at computer
generations.

Computers Then and Now

FIGURE 1-7
A brief look
at computer
generations.

FIFTH-GENERATION COMPUTERS

Some aspects of fifth-generation computers, such as the natural language input and artificial intelligence used by the IBM Watson computer shown competing on *Jeopardy!* here, already exist.

Hardware

- Hardware: The physical parts of a computer
 - Internal hardware
 - Located inside the main box (system unit) of the computer
 - External hardware
 - Located outside the system unit
 - Connect to the computer via a wired or wireless connection
 - Hardware devices are associated with all five computer operations

Hardware

- Input Devices

- Used to input data into the computer
- Keyboards, mice, scanners, cameras, microphones, touch pads, touch screens, fingerprint readers, etc.

- Processing Devices

- Perform calculations and control computer's operation
- Central processing unit (CPU) and memory

- Output Devices

- Present results to the user
- Monitors, printers, speakers, projectors, etc.

Hardware

- Storage Devices

- Used to store data on or access data from storage media
- Hard drives, CD/DVD discs and drives, USB flash drives, etc.

- Communications Devices

- Allow users to communicate with others and to electronically access remote information
- Modems, network adapters, routers, etc.

Hardware

Software

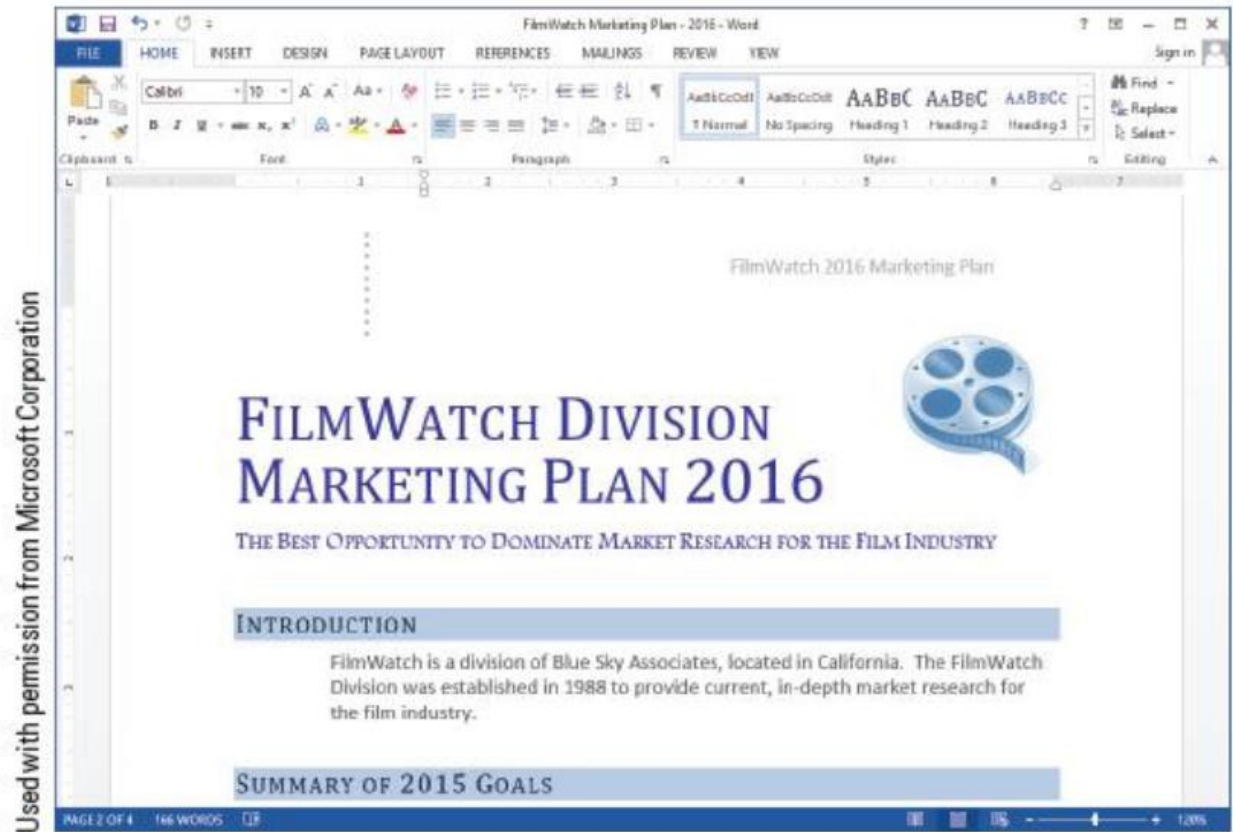

- Software
 - The programs or instructions used to tell the computer hardware what to do
- System Software
 - Operating system starts up the computer and controls its operation
 - Without OS, computer cannot function
 - Boots the computer and launches programs at the user's direction
 - Most use a GUI to interact with the user via icons, buttons, tiles, etc.
 - Windows, Mac OS, Linux, Android, etc.

Application Software

- Application Software
 - Performs specific tasks or applications
 - Creating letters, budgets, etc.
 - Managing inventory and customer databases
 - Editing photographs
 - Scheduling appointments
 - Viewing Web pages
 - Exchanging e-mail
 - Burning DVDs
 - Designing homes
 - Playing games

Application Software

- Examples of application software
- Word processing program:
- Multimedia programs
- Web browsers
- E-mail programs

WORD PROCESSING PROGRAMS

Allow users to create written documents, such as reports, letters, and memos.

Computer Users and Professionals

- Computer Users (end users)
 - People who use a computer to obtain information
- Computer professionals include:
 - Programmers
 - Write programs computers use
 - Systems analysts
 - Design computer systems
 - Computer operations personnel
 - Manage day-to-day computer operations
 - Security specialists
 - Secure computers and networks against hackers

Computers To Fit Every Need

- Six basic categories of computers:
 - Embedded computers
 - Mobile devices
 - Personal computers
 - Servers
 - Mainframe computers
 - Supercomputers

Embedded Computers

- Embedded Computers

- Embedded into a product and designed to perform specific tasks or functions for that product
- Cannot be used as general-purpose computers
- Often embedded into:
 - Household appliances
 - Thermostats
 - Sewing machines
 - Treadmills
 - Answering machines
 - Cars

COURTESY VOLVO CARS OF NORTH AMERICA

A camera located under the mirror detects moving vehicles in the driver's blind spot.

A light indicates that a moving vehicle is in the driver's blind spot.

FIGURE 1-12
Embedded computers. This car's embedded computers control numerous features, such as notifying the driver when a car enters his or her blind spot.

Mobile Devices

- Mobile Device
 - A very small device with some type of built-in computing or Internet capability
 - Typically has a small screen and keyboard
 - Examples:
 - Smartphones
 - Handheld gaming devices
 - Portable digital media players
 - Media tablets

FIGURE 1-13
Mobile devices.

Personal Computers (PCs)

- Personal Computer (PC)
 - Small computer designed to be used by one person at a time
 - Also called a microcomputer
 - Available in different sizes and shapes
- Desktop Computers
 - Tower case, desktop case, or all-in-one
 - PC or Macintosh
 - Not portable

FIGURE 1-14
Desktop computers.

TOWER COMPUTERS

ALL-IN-ONE COMPUTERS

Portable Computers

- Portable Computers
 - Designed to be carried around easily
 - Fully functional computers
 - Notebook (laptop) computers
 - Typically use a clamshell design
 - Tablet computers
 - Usually use a digital pen/stylus or touch screen
 - No physical keyboard; can use on-screen or attached keyboard
 - Hybrid notebook-tablet computers
 - Netbooks
 - Smaller and have more limited features than conventional notebooks

Portable Computers

NOTEBOOKS

TABLETS

HYBRID NOTEBOOK-TABLETS

 **FIGURE 1-15**
Portable computers.

Thin Client and Internet Appliances

- Thin Client

- Designed to utilize a network for much of its processing
- Lower cost, increased security and easier maintenance
- Limited or no local storage
- Not able to function as a computer if network is down

- Internet Appliance

- Specialized network computer designed for Internet access
- Some use apps to deliver news, sports scores, weather, music, and other Web-based information

Thin Client and Internet Appliances

THIN CLIENTS

STAND-ALONE INTERNET DEVICES

INTERNET-ENABLED GAMING CONSOLES

FIGURE 1-16
Thin clients and
Internet appliances.

Servers

- Server

- A medium-sized computer used to host programs and data for a small network
- Sometimes referred to as a minicomputer
- Users connect via a network with a computer, thin client, or dumb terminal
- Virtualization
 - Creating virtual rather than actual environments (often used to share a server for increased efficiency)

Mainframe Computers

- Mainframe Computer
 - Powerful computer used by many large organizations to manage large amounts of centralized data
 - Standard choice for hospitals, universities, large businesses, banks, government offices
 - Located in climate-controlled data centers and connected to the rest of the company computers via a network
 - Larger, more expensive, and more powerful than servers
 - Usually operate 24 hours a day
 - Also called high-end servers or enterprise-class servers

Mainframe Computers

FIGURE 1-18

Mainframe computers.

Mainframes are used to perform large processing tasks for businesses.

Supercomputers

- Supercomputer
 - Fastest, most expensive, most powerful type of computer
 - Generally run one program at a time, as fast as possible
 - Can cost several million dollars each
 - Tend to be very large and contain a large number of CPUs
 - Titan is one of the fastest computers in the world

Supercomputers

Courtesy of Oak Ridge National Laboratory

FIGURE 1-19

The Titan supercomputer.

Supercomputers are used for specialized situations in which immense processing speed is required.

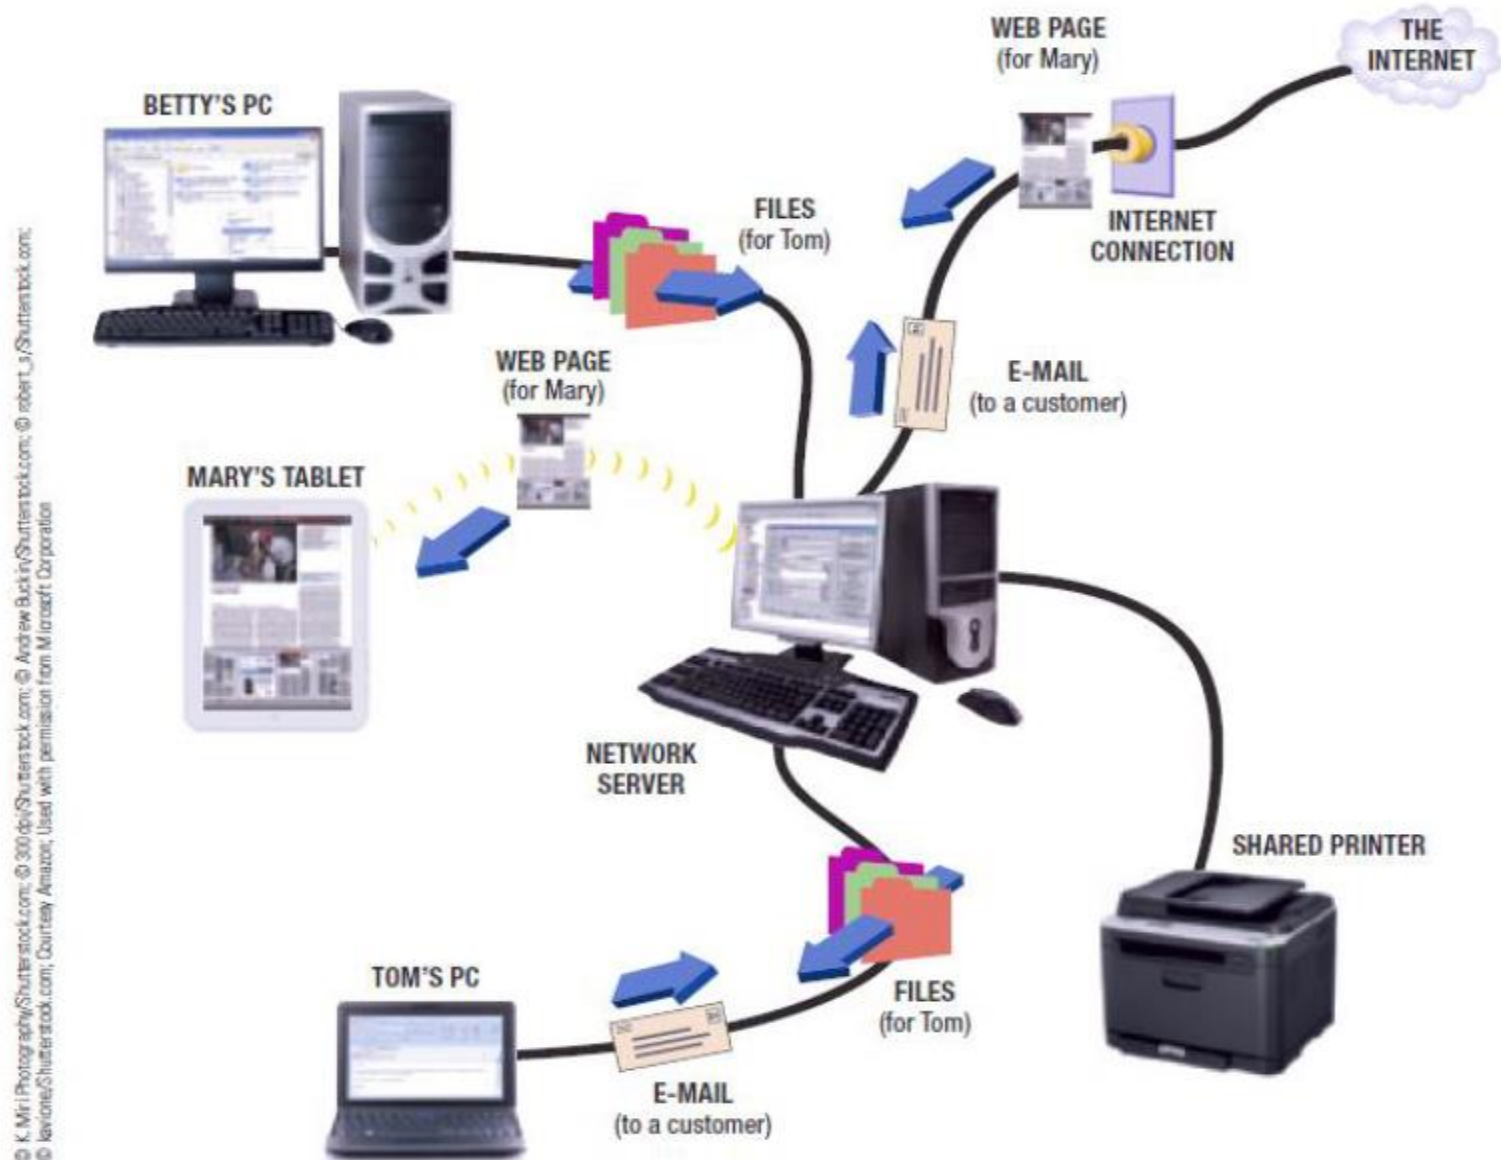

Computer Networks and the Internet

- Computer Network
 - A collection of hardware and other devices that are connected together
 - Users can share hardware, software, and data
 - Users can communicate with each other
- Network Servers
 - Manage resources on a network

Computer Networks and the Internet

- Computer networks exist in many sizes and types
 - Home networks
 - School and small office networks
 - Large corporate
 - Public wireless networks
 - Mobile telephone networks

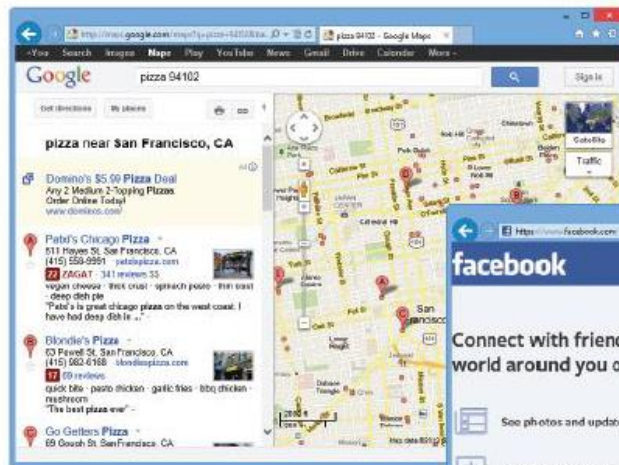

Computer Networks and the Internet

What Are the Internet and the World Wide Web?

- Internet
 - The largest/most well-known computer network in the world
 - Individuals connect using an Internet service provider (ISP)
- World Wide Web
 - One resource (a vast collection of Web pages) available through the Internet
 - Web sites contain Web pages stored on Web servers
 - Viewed using a Web browser (Internet Explorer, Chrome, Safari, Firefox, Opera, etc.)
 - Offers a wide variety of information

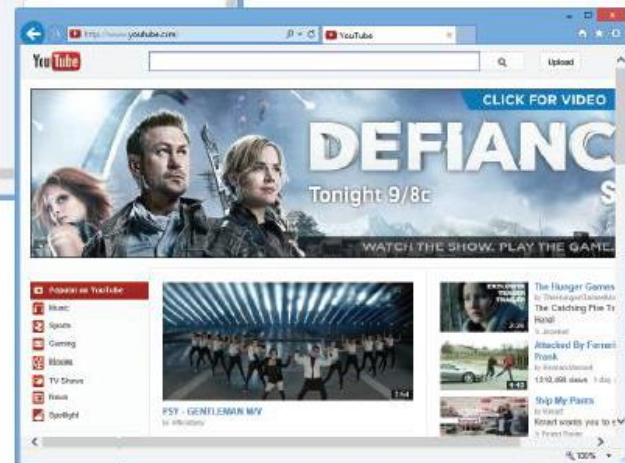

What Are the Internet and the World Wide Web?

LOOKING UP INFORMATION

ACCESSING SOCIAL NETWORKS

WATCHING VIDEOS, TV SHOWS, AND MOVIES

FIGURE 1-21
Some common Web activities.

Accessing a Network or the Internet

- Need a modem or network adapter to connect
- Some networks require a username and password
- Internet connections can be:
 - Direct (always-on) connections
 - Dial-up connections
- Internet addresses are used to access resources on the Internet
 - IP (Internet Protocol) address
 - Numeric address that identifies computers (207.46.197.32)

IP Addresses and Domain Names

- IP Addresses
 - Are numeric and unique
- Domain Names
 - Correspond to IP addresses
 - Top-level domains (TLDs)
 - Identifies type of organization or its location

ORIGINAL TLDs	INTENDED USE
<i>.com</i>	Commercial businesses
<i>.edu</i>	Educational institutions
<i>.gov</i>	Government organizations
<i>.int</i>	International treaty organizations
<i>.mil</i>	Military organizations
<i>.net</i>	Network providers and ISPs
<i>.org</i>	Noncommercial organizations
NEWER TLDs	INTENDED USE
<i>.aero</i>	Aviation industry
<i>.biz</i>	Businesses
<i>.fr</i>	French businesses
<i>.info</i>	Resource sites
<i>.jobs</i>	Employment sites
<i>.mobi</i>	Sites optimized for mobile devices
<i>.name</i>	Individuals
<i>.pro</i>	Licensed professionals
<i>.uk</i>	United Kingdom businesses

FIGURE 1-22

Sample top-level domains (TLDs).

Uniform Resource Locators (URLs)

- Uniform Resource Locators (URLs)
 - Uniquely identifies a Web page, including
 - Protocol or standard being used
 - Web server hosting the page
 - Names of folders in which the Web page file is stored
 - Web page's filename

Uniform Resource Locators (URLs)

- Protocols:
 - Hypertext Transfer Protocol (http://) is typically used to display Web pages (https:// is used for secure Web pages)
 - File Transfer Protocol (ftp://) is often used for file exchange

Web page URLs usually begin with http:// (for nonsecure Web pages) or https:// (for secure Web pages).

This part of the URL identifies the Web server hosting the Web page.

Next comes the folder(s) in which the Web page is stored, if necessary.

This is the Web page document that is to be retrieved and displayed.

`https://twitter.com/jobs/index.html`

FIGURE 1-23
A Web page URL.

E-mail Addresses

- E-mail addresses consist of:
 - Username
 - An identifying name
 - The @ symbol
 - Domain name for the computer that will be handling the person's e-mail (mail server)
- Pronouncing Internet addresses

TYPE OF ADDRESS	SAMPLE ADDRESS	PRONUNCIATION
Domain name	berkeley.edu	berkeley dot e d u
URL	microsoft.com/windows/ie/default.asp	microsoft dot com slash windows slash i e slash default dot a s p
E-mail address	president@whitehouse.gov	president at white house dot gov

Copyright © 2015 Cengage Learning®

FIGURE 1-24
Pronouncing
Internet addresses.

Surfing the Web

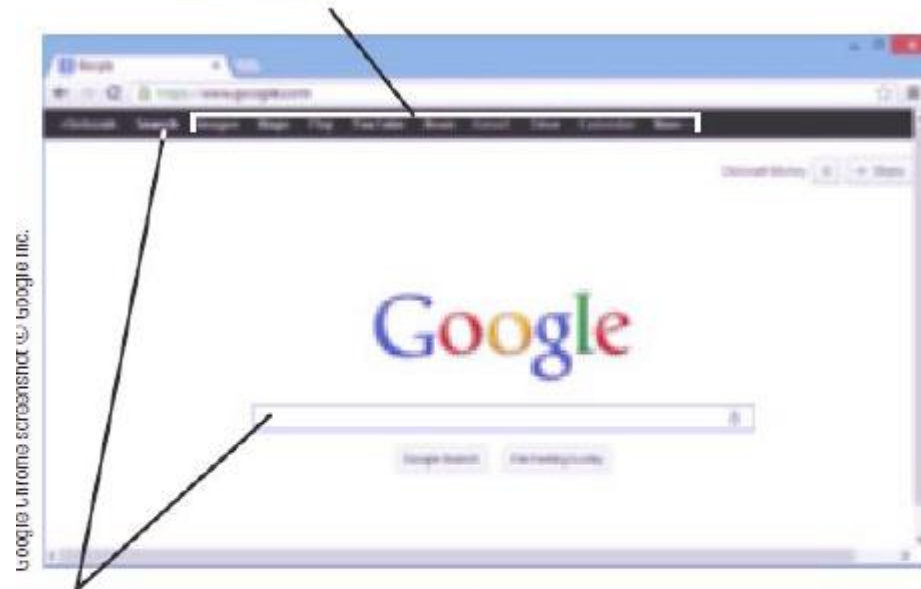

- Web browser
 - Used to display Web pages
- Browser starting page or home page
 - The first page displayed when the browser is opened
- To navigate to a Web page, you can:
 - Type a URL in the Address bar
 - Click a hyperlink – graphics or text linked to other Web pages
 - Select a Favorite/Bookmark or page from the History list

Searching the Web

- Search site:
 - Helps you locate what you are looking for
 - Typically search using keywords
- Reference sites
 - Look up addresses,
 - telephone numbers
 - ZIP codes, maps, etc.

OTHER SEARCHES

Use these options to search for images, maps, videos, news, video, products for sale, and more, as well as access your Gmail, Google Drive, or Google Calendar.

KEYWORD SEARCHES

Because the Search option is selected, type keywords here and press Enter to see a list of Web pages matching your search criteria.

FIGURE 1-26

The Google search site displayed in the Chrome browser.

E-Mail

- Electronic mail (e-mail)
 - Electronic messages exchanged between computers on a network
- One of the most widely used Internet applications
- Can be a conventional e-mail program, Web-based, or mobile-based

Conventional

Microsoft Outlook

Mac OS X Mail

Web-based

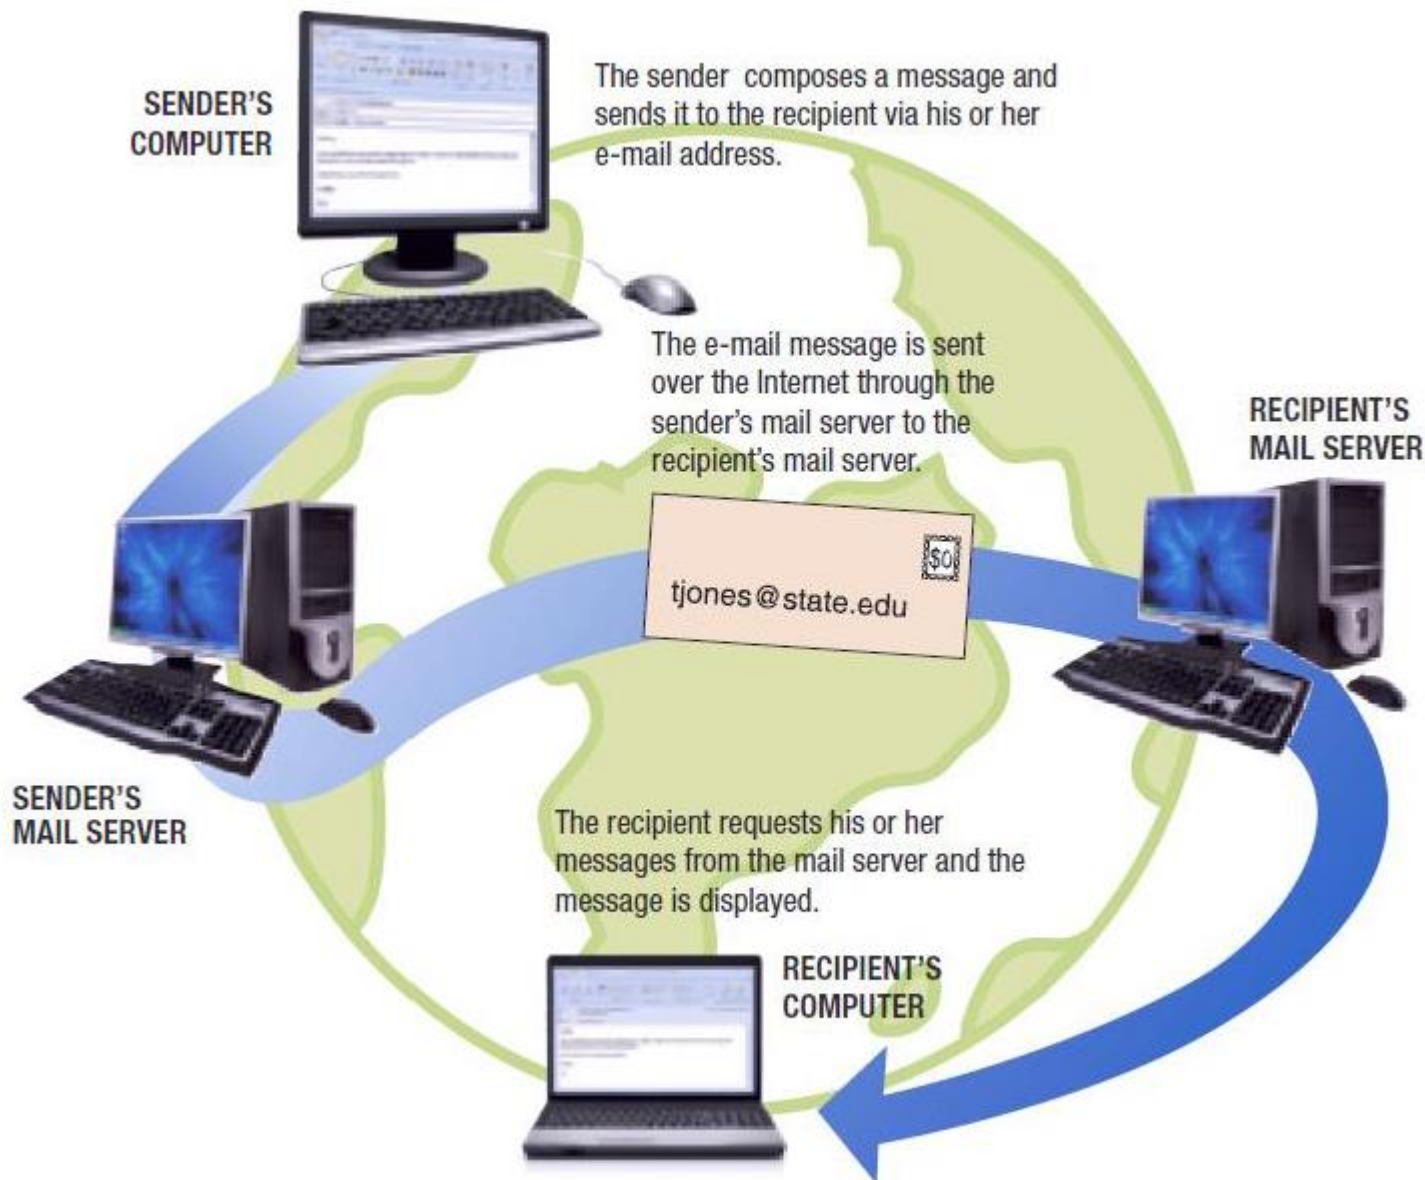

Gmail

Outlook.com

E-Mail

- Can contain photos, attached files, etc.
- Mobile e-mail may require a fee
- Other types of mobile communications
 - Short Message Service (SMS)
 - Multimedia Message Service (MMS)

E-Mail

© Julia Ivantsov/Shutterstock.com; © 300dpi/Shutterstock.com; © tatniz/Shutterstock.com; Copyright © 2015 Cengage Learning®

FIGURE 1-27
How e-mail works.

Computers and Society

- The vast improvements in technology over the past decade have had a distinct impact on daily life, at home and at work
- Many benefits of a computer-oriented society
 - Ability to design products before construction leads to safer products
 - Earlier medical diagnoses and more effective treatment
 - Devices that allow physically and/or visually challenged individuals to perform job tasks
 - Documents e-mailed or faxed in moments
 - Download information, music, programs, movies, and more on demand

Computers and Society

- Computer-oriented society also has risks
 - Stress and health concerns
 - Spam
 - Computer viruses and malware
 - Identity theft and phishing
 - Privacy issues
 - How data is collected
 - How secure is the collected data

Computers and Society

- Differences in online communications
 - Less formal than traditional
 - Netiquette
 - Be polite and considerate of others
 - Refrain from offensive remarks
 - Abbreviations (acronyms) and emoticons
 - Acronyms, such as BTW (by the way)
 - Illustrations of faces, such as 😊

Computers and Society

RULE	EXPLANATION
Use descriptive subject lines	Use short, descriptive subject lines for e-mail messages and online posts. For example, "Question regarding MP3 downloads" is much better than a vague title, such as "Question."
Don't shout	SHOUTING REFERS TO TYPING YOUR ENTIRE E-MAIL MESSAGE OR ONLINE POST USING CAPITAL LETTERS. Use capital letters only when it is grammatically correct to do so or for emphasizing a few words.
Watch what you say	Things that you say or write online can be interpreted as being sexist, racist, or in just general bad taste. Also check spelling and grammar—typos look unprofessional and nobody likes wading through poorly written materials.
Don't spam your contacts	Don't hit <i>Reply All</i> to an e-mail when a simple <i>Reply</i> will do. The same goes for forwarding e-mail chain letters, <i>retweeting</i> every joke you run across, or sending every funny YouTube video you find—to everyone you know.
Be cautious	Don't give out personal information—such as your real name, telephone number, or credit card information—to people you meet online.
Think before you send or post	Once you send an e-mail or text message or post something online, you lose control of it. Don't include content (such as compromising photos of yourself) that you would not want shared with others, and don't tag people in photos that are unflattering to them. In addition, don't e-mail or post anything if emotions are running high—wait until you calm down.

FIGURE 1-30

Netiquette. Use these netiquette guidelines and common sense when communicating online.

Computers and Society

- The Anonymity Factor
 - Gives many individuals a sense of freedom
 - Can also be abused
- Information Integrity
 - Use common sense when evaluating online content
 - Check your source--not all information on the Internet is accurate

Summary

- Computers in Your Life
- What is a Computer and What Does It Do?
- Computers to Fit Every Need
- Computer Networks and the Internet
- Computers and Society
