

Lab 8 — Power BI Dashboard Design Challenge

Data Visualisation | 1 Hour | Groups of 2 | Kaggle Dataset | Power BI Desktop

Overview

In this lab you will work in pairs. Choose any dataset from [kaggle.com/datasets](https://www.kaggle.com/datasets), build a Power BI dashboard, and present it to the instructor in a short demo. You have full freedom to pick a topic that interests you.

What You Need to Do

- Download a dataset from Kaggle (CSV or Excel format).
- Load and clean it in Power Query — fix data types, remove blanks.
- Build a dashboard in Power BI with the required visuals below.
- Present your dashboard to the instructor in a 5–10 minute demo.

Dashboard Requirements

- **Title** — clearly visible with both team members' names.
- **3 KPI Cards** — show key numbers (total, average, count, etc.).
- **Trend Chart** — line or bar chart showing change over time.
- **Comparison Chart** — bar, column, or pie comparing categories.
- **2 Slicers** — let the user filter by category, date, or region.
- **Insight Box** — a text box with your one key finding in plain words.

Dataset Tips

Pick a dataset with at least **500 rows**, a **date column**, and a **numeric column**. Good topics: sales, sports, health, climate, education, finance. Kaggle filter tip: set File Type = CSV and Usability > 7.

Viva / Demo

Both members must speak. Explain what your dataset is, walk through each visual, show a live slicer interaction, and share your most interesting finding. The instructor may ask questions about your design choices.

Marks

Component	Marks
Required visuals (KPIs, charts, slicers, insight box)	60
Design and layout	20
Viva — explanation and Q&A;	20
Total	100

Save your .pbix file and share it with the instructor before leaving the lab.
